Single Track Bowstring Bridge

Bridge Instructions

- 1** Read through these instructions and familiarise yourself with the parts on the Kit Map enclosed.

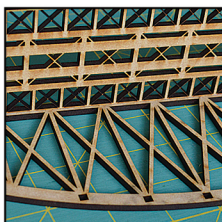

Recommended Glue: Deluxe Materials Super Phatic Glue (DLAD-21) available from www.scalemodels scenery.co.uk

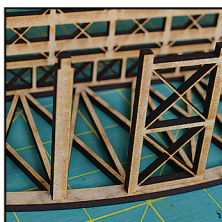

- 8** Release the Rivet Strips (K) from the laserboard sheet and glue into place along the upper edge of of the bridge sides. There should be 4 sections per side.

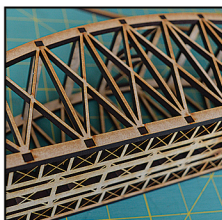

- 2** Glue Bridge Deck (B) into Side (A) ensuring all side tabs on the bridge deck are securely located into the holes on the bridge side.

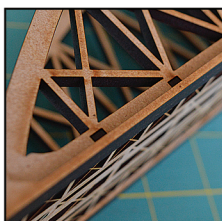

- 3** Next, glue the Upper Trusses (C) & 4 x (D) into position on the bridge side.

- 4** Glue the second Bridge Side (E) into place to complete the main structure assembly.

- 5** Glue (F) & (G) along the bottom edges of each bridge side, ensuring the bottom edge & each end sits perfectly flush with the edges of the bridge side as shown.

- 6** Glue parts (H) & (I) into position along the top, outer edges of the bridge sides as shown, ensuring that the edges sit perfectly flush with the outer edges of the bridge sides.

- 7** Release the Gusset Plates (J) from the engraved laserboard sheet, and glue into place over each of the upper & lower truss joints on the bridge sides. There should be 24 on each bridge side.
